

Montgomery Dermatology, LLC has three phototherapy units to easily treat psoriasis and vitiligo depending on the patient's specific needs.

The Daavlin 3 Series phototherapy cabinet for full-body treatment accommodates any size patient and can easily accommodate a wheel chair. It has two quiet fans for total air movement controlled by the patient for their personal comfort. The open top enhances ventilation and is not disturbing to claustrophobic patients.

The Daavlin M Series is a separate unit designed for effective and efficient treatment of the hands or feet.

The Levia LiteSpot™ and LiteBrush™ deliver NB UVB directly and precisely to the affected areas of skin and scalp, minimizing the effect on surrounding uninvolved skin. The fiber optic brush is unique to Daavlin within the phototherapy industry. The LiteBrush bypasses the hair and delivers light directly to the scalp to provide the full healing benefit to the patient.
