

DEMOGRAPHIC INFORMATION

Collecting accurate data is the basic foundation needed to help eliminate disparities and improve quality of care. Valid and reliable data are fundamental building blocks for identifying differences in care and developing targeted interventions such as need or interpreter services, translated patient health care information, improving rates of preventative services, and cultural competency training for staff. The data also give the physician practice an accurate snapshot and trending of patient population and the need for more care interventions.

INSURANCE DISCLAIMER

Please read the statements below and verify by placing your **initials** next to each statement:

_____ I understand that it is my responsibility to understand my insurance copay and deductible obligations.

_____ I accept all financial responsibility for copay and deductible payments as determined by my insurance plan.

_____ I understand that if I have a biopsy performed today, the specimen will be sent to a lab for processing. I understand that I may receive a bill from the lab for processing of the specimen. This charge is separate from the charges I may receive from Montgomery Dermatology and I am responsible for paying the lab directly.
